

STATE OF SOUTH AUSTRALIA.OFFICIAL DECEMBER HARVEST FORECAST, 1931-32.

Memorandum for the Hon. the Chief Secretary.

I respectfully transmit herewith the Official Forecast of the Wheat, Barley and Oats Harvest 1931-32 due by Resolution of Statistical Conference to be issued about December 15th of each year.

The Department's estimate in November for the Wheat Crop was 43,000,000 Bushels and last week I intimated that the December advices indicated an improvement.

The estimates for the State are -

Wheat - Acres to be reaped 3,900,000 (4,180,513), including about 100,000 acres of failure.  
Total expected yield 44,500,000 (34,871,526) Bushels.  
Average per acre - 11.41 (8.34) Bushels.

Barley - Total production 4,375,000 (3,960,929) Bushels.

Oats - Total production 2,400,000 (2,080,311) Bushels.

In reference to Wheat I ought to mention that the reports state that, owing to the dry period of September and October, many of the late sown crops have gone off. This is an important factor which reduces the average in some Counties where satisfactory yields are being reaped of earlier sown crops. The proportion of such late sown crops cannot be accurately ascertained and it may be that undue allowance has been made for same; if so, then the present estimate may even be exceeded.

Number of Farms. - It is estimated that 14,800 farmers have sown wheat this season, increase 200; and of this number 2,832 (representing over 25% of the acreage) have furnished reports which together with the general reports of Police Officers and my rainfall records represent the source of information for this estimate.
